

Geostatistics for environmental applications : geoEnv 2014 : book of abstracts  
 the 10th International Conference on geostatistics for environmental applications, Paris, France, July 9-11, 2014  
 Nicolas Jeannée, Thomas Romary editors  
 European conference on geostatistics for environmental applications (10 ; 2014 ; Paris)  
 Presses des Mines, Paris  
 Sciences de la Terre et de l'environnement  
 ISBN: 978-2-35671-136-6

## Table des Matières

The 10th International

Conference on Geostatistics for Environmental Applications

Nicolas Jeannée et Thomas Romary

Survey of methods to define the equivalent permeability $K_{ij}$ in heterogeneous, composite, and fractured media	1
Wave propagation in randomly heterogeneous geologic media : space-time structure and upscaling	2
A new class of anisotropy models	3
Geostatistical 3D geomechanical models constrained by pre-stack seismic data	4
A model-based geostatistical approach for skewed radioactivity data	6
Simulation of hydraulic heterogeneity and upscaling permeability and dispersivity in heterogeneous sandy-clay formation	7
Enhanced edge based algorithm for thermal image sharpening	9
Functional kriging in oceanography : predicting chlorophyll-a profiles	10
A pragmatic approach to estimate probabilities of exceeding limit values in air quality. Application to PM10 and O3	11
Conditional simulations for fields of extreme precipitation	12
Algorithms for conditional simulation of max-stable processes	13
Geostatistical modeling of heavy metal stream sediment samples	14
Geostatistical generation of precipitation time series to consider wet deposition in atmospheric dispersion modeling	15
The use of Geostatistics for data assimilation in operational oceanography	16
Methodology for simulating fractures in a fault zone : Analysis of the data from « cirque de Navacelles »	17
On the spatial interpolation of biodiversity indices	19
Geometrical modeling of karstic diagenesis in carbonate systems	20
An neural network residual cokriging approach to predict soil separates in a Mediterranean basin	21
Building a geological reference platform using sequence stratigraphy combined with geostatistical tools	23
Building piezometric maps : contribution of geostatistical tools	25
A new parametric class of cross-covariance functions for multivariate spatio-temporal random fields	27
Estimation of coefficients of thermal response test : the choice of the coordinates space of the random function	28
Updating the soil map of the Netherlands in areas with peat soils	29

Structural analysis and modeling choice for air quality data	31
Particulate matter and meteorological conditions : a multivariate spatio-temporal analysis	32
Geostatistical methodologies for spatial accuracy assessment and update of land cover maps	33
Integration of EMI sensor data in soil sampling scheme optimization using continuous simulated annealing	34
Stochastic inverse modelling of groundwater flow using proxy simulations based on DFN models	36
How to check for connectivity in Geomodels	38
Development of a 3D geometric model for a scarce data multi-level aquifer system based on inequality-constrained kriging case of the « Jeffara de Medenine » aquifer (SE Tunisia)	40
A multivariate nonstationary covariance function for automatic classification of remotely sensed hyperspectral data	42
Tool for the identification of significant and sustained upward trends in groundwater in accordance with the water framework directive	43
Geostatistical study to support sustainable remediation of a site with historical lead impact	44
Spatial prediction of bulk density estimates obtained with pedotransfer functions	46
Multiscale spatial modelling of radioactive pollutions with a kernel learning algorithm	47
Experimental variograms of the underlying Gaussian random functions in the truncated Pluri-Gaussian models	49
Geostatistical deconvolution with non destructive measurements for radiological characterization of contaminated facilities	50
Calculation of annual 90th percentile on time-series of nitrate concentrations in surface water	52
Risk assessment of soil compaction in Walloon region (Belgium)	53
Space-time model to predict atmospheric pollutant concentration levels based on block sequential simulation	55
Digital soil mapping of chemical properties, pH and AI, the North, North-west and Serrana region of Rio de Janeiro, Brazil	57
Trace element abundance and renal disease in northern Ireland	58
A generalized convolution model and estimation for non-stationary random fields	59
Estimation of non-stationary random fields through space deformation	60
Methodological and practical aspects of geostatistical bootstrap for quantifying global and local soil contamination uncertainty	61
Applying geostatistics to estimate TCE soil characterization and improve associated remediation cost	62
Bayesian data fusion applied to soil drainage classes spatial mapping	64
Multivariate max-stable spatial processes	66
Comparison of PEST's null space Monte Carlo with a Bayesian approach	67
Beyond ensemble Kalman filter	68
Kriging for data collected over large areas of the Earth's surface	69
Geostatistical analysis of geophysical properties in a geothermal reservoir study	70

Field sampling and analytical measurements for validation of geostatistical interpolation of airborne gamma-ray data	71
Geometrical characterization of precious marble natural resources by statistical analysis of structural data from the Apuan Alps (Italy)	73
Hydraulic parameterization of 3d subsurface models : from measurement scale to model-scale	74
A spatially-varying coefficient model for the air pollution mapping	76
Kriging based modelling of the 3D chemical composition of soil by integrating 2D chemical maps with 3D X-ray computed micro-tomographic images of soils	78
Realistic non-stationary spatial interpolation	80
Inverting hydraulic heads in an alluvial aquifer constrained with electrical resistivity tomography data through multiple-point statistics and probability perturbation method : a case study	81
Much ado about spatial uncertainty	83
Fast conditional simulation of spatial random fields with equality and inequality constraints and arbitrary marginals	84
Geophysical stereology : quantifying uncertainty of 3D object parameters from 2D GPR data of a braided river system. Application to the Tagliamento River (NE Italy)	85
Application of multiple-point geostatistics on groundwater flow and transport in media with complex geological heterogeneity : lessons learnt and remaining challenges	87
New methodology to determine water quality in a Spanish river based on Shewhart-type-control-chart runs rules for functional data	88
Paleotemperature reconstructions using a spatio-temporal multicore Bayesian model	90
Estimation of long-term volcanic hazard under evolving tectonic conditions at 1 Ma timeframe	91
Air quality index revisited from a compositional approach	93
Use of geostatistics for contaminated sites characterization : experience feedback, recommendations for practical implementation and needs for further research and development	95
GWSDAT (GroundWater Spatiotemporal Data Analysis Tool)	96
Fisherman spatial behavior and fish acoustic biomass : two sides of the same coin ?	97
Approximate model based on simplified physics and functional principal component to accelerate Monte Carlo Markov chain	99
A geostatistical methodology for the performance evaluation of groundwater quality monitoring networks	101
Spatio-temporal wireless network performance forecast with using geostatistical simulation methods	103
Environmental data modelling using extreme learning machines	104
Assessing the feasibility of geostatistical approaches to quantify stockpiles characterization using variogram modeling (with case examples from tow Iron stockpiles, Iran)	105
Estimating herbivore species abundance and distribution patterns in Kruger national park South Africa using area to point poisson kriging and P-field simulation	107
Automated screening of spatio-temporal anomalies in long term / large scale air quality observation time series	109

Spatial regression for general purpose software	111
Likelihood-representative sampling from (log) normal random field models	112
Assessing climate impacts on low flows and droughts combining upward and downward approaches	114
Universal kriging with training images	116
Variogram-based template selection for multiple-point geostatistics	117
Spatial relationship quantification between environmental, socioeconomic and health data at different geographic levels	118
Water of the lake of Geneva during some decades : water circulation, temperatures, pollutants depicted with spatio-temporal geostatistics and machine learning	119
Application of stochastic simulation techniques in nation-wide 3D subsurface models of the Netherlands	121
Data assimilation for urban air quality simulation	123
Spatial and temporal changes in soil organic carbon assessment using an integrated geostatistical and compositional data analysis approach	124
Multivariate modelling of interconnected variables with different characteristics	126
A novel approach to kriging for functional compositional data with application to particle-size curves in heterogeneous aquifers	127
A new spatial copula function for modeling spatial dependency and interpolation	129
Towards regionalised biodiversity indicators for fisheries management	130
Efficient prediction designs for random fields	131
Non-linear multivariate geostatistical modelling using pair-copulas	132
Spatial and time variation in underground water quality parameters in klodzko water intake area (sw part of poland) using geostatistical methods	133
Surface air temperature mapping from remote sensing and geographical data	135
Predictive mapping of soil properties at high resolution by component wise gradient boosting	136
Reproducing chaos and persistence in a daily rainfall time-series : a comparison between a Markov-Chain approach and multiple-point statistics	137
Spatio-temporal variability of nutrients in irrigation waters and its contribution on fertilization of olive groves in Crete island, Greece	139
Estimation and validation of the hourly components of solar irradiation using in situ and satellite data	141
Inverse modeling of moving average kernels for 3D Gaussian simulation	142
Characterization of desertification indicators based on earth observation data	143
Mapping the habitats of high fish concentrations with non-linear and multivariate geostatistics	145
Identify model scale parameters with ground penetrating radar data	147
Geostatistical modeling of soil contaminated improvement with on-site analysis	148
Downscaling coarse resolution RS and climatic data with the support of covariates	150
3D modelling of Scottish soil properties	151

New approach in data analysis from areas with limited ornithological data : automated modelling of small passerine densities from approximate transects	152
Experimental variogram for data with measurement errors	154
Multiple point statistics : how good is my training image ?	155
Geostatistical approach to National Forest Inventory data : a study case in the Province of Trento (Italy)	156
Influence of heterogeneity on heat transport simulations in shallow geothermal systems	158
Large-scale probabilistic optimization using non-stationary geostatistics for uncertainty assessment of groundwater flow and solute transport	159
Bayesian first arrival travel time tomography by interacting MCMC	160
Assessment of multiple point simulation quality focusing on connected geobodies	161
Incorporation of geomorphological information into the stochastic simulation of karst conduits	162
A urban geochemical background database for contaminated land management	163
The stochastic partial differential equation (SPDE) approach to represent Gaussian random fields	165
Modeling sedimentary structures using non uniform rational B-splines	166
Comparison of methods to estimate the sampling variance of design-based estimates of spatial means from systematic random sampling : application to the French soil monitoring network data	167
Spatial point pattern analysis of soil survey sampling locations	169
Complex estimation methods for simple fish	171
Modeling and updating joint uncertainty in trend and training image in multi- point geostatistics	172
The dynamics and spatial variability of soil organic carbon content under grasslands in Southern karelia	173
Scale-up of reactive-diffusive processes in heterogeneous media	175
Circulation controls of the spatial structure of maximum daily precipitation over Poland	177
Conditioning multiple point statistics simulations to block data using direct sampling	179
A stochastic space-time model for intermittent precipitation occurrences	180
Potential mapping from geochemical surveys using a Cox process	181
Applied geo-information in spatial prediction of landslide hazards case study in red river basin, Vietnam	182
Delineation of highly permeable backbones in heterogeneous hydraulic conductivity fields	183
Geostatistical analysis of water quantity and quality spatiotemporal data	184
Bayesian approach for estimating the space-time variability of groundwater level in a sparsely monitored basin on a Mediterranean island	186
Simulation of erosion processes and their impact on the water quality in a hydro-ecological model : use of geostatistics as a validation tool	188
Conditional object-based simulations of « flexible » objects	190
Cokriging of proportions to estimate tuna distribution from vessels' trajectories	191

Geostatistical combination of catch data derived from fisheries and research surveys	192
Air emissions of sulphur oxides and total suspended particulates from combustion plants and domestic sector in Silesia. Analysis using geostatistics	193
Author Index	195
