Dynamic models of plant growth

Contents

1. Introduction.....	6
1.1. Modelling of plants	6
1.2. Dynamic models.....	7
1.3. Results	8
1.3.1. 1D case.....	8
1.3.2. 2D case.....	10
1.3.3. 1D case with branching.....	11
2. 1D model without branching.....	12
2.1. Model	12
2.2. Stationary solutions	14
2.3. Numerical simulations.....	14
2.3.1. Linear growth.....	14
2.3.2. Periodic growth.....	15
3. Two-dimensional problem	17
3.1. Model and algorithm	17
3.2. Cell cycle and external signals	25
3.3. Time evolution	26
3.4. Time and space steps, other parameters	31
3.5. Other geometries	31
3.6. Growth with merging	32
4. 1D model with branching.....	33
4.1. Branching conditions.....	33
4.2. Model	34
4.3. Graphics	36
4.4. Apical domination	37
4.5. Plant architecture.....	43
5. Discussion.....	46
5.1. Why are plants not eternal?	46
5.2. Emergence of forms	46
5.3. Apical domination	50
5.4. Gene expression	51
5.5. Biological diversity and structural stability.....	51
5.6. Nonlinear dynamics.....	53
6. Annexe 1. Numerical algorithm: 1D with branching	56
7. Annexe 2. Cross section area	61
8. Annexe 3. 2D stationary solutions	64
